

INFIELD SOILS THAT PERFORM

EARTHWORK & ENGINEERED TOPSOILS

DirTech NW has state of the art equipment to blend custom topsoils and engineered soils. We are a supplier of sport mixes in the Pacific NW specializing in engineered soils for professional, intermediate and recreational fields.

Dirtech NW Infield Soil

DT Infield Soil mixtures is a specialized blend of red clay, silt and sand. This formula is tested annually to ensure consistent quality and a balanced product to absorb moisture and provide long lasting, professional grade athletic fields.

This surface can be modified or engineered to meet the specific requirements of any facility in the Pacific Northwest. Once installed, the compaction will hold shape, shed water and play true yet still have elasticity and bounce with it's coarse and medium sand content.

DirTech NW Engineered Soils

DT 5.5 Infield: provides premium playing surface for athletic fields desiring a blend of red clay, silt, and sand. DT 5.5 Infield mix resembles professional grade fields and widely used across the Pacific NW.

(spec 1 Cubic Yard= 1.2 tons)

DT 6.4 Infield: provides high quality playing field for groups that want the benefits of a red clay infield. Product sheds water yet has enough sand to remain soft in wet climate.

(spec 1 Cubic Yard= 1.16 tons)
